Data scientist building product-issue monitoring and customer-targeting systems. Led an in-house consumer insights platform connecting customer reviews to manufacturing follow-up, and developed predictive models evaluated through CRM experiments.

PROFESSIONAL EXPERIENCE

Public School District (Confidential) United States

Data Scientist Intern June 2026 - August 2026

- Built a cross-school evaluation dataset by extracting and standardizing **50,000+ records** from inconsistent document templates; enabled district-, building-, and teacher-level reporting in Power BI.
- Analyzed **25,000+ qualitative comments** with LLMs; found that the lowest-scoring criterion also had the most missing supporting evidence, informing district professional development priorities.
- Coordinated with principals, departmental users, and data-security staff on **PII masking and separate identity mappings** to limit exposure of sensitive evaluation data.

Yuhan-Kimberly (Kimberly-Clark) Seoul, South Korea

Data Scientist - AI Labs October 2021 - June 2025

Consumer Insights & Product Risk Monitoring

- Proposed and led an **in-house NLP platform** covering 100+ products and 20,000+ daily feedback records; replaced vendor dependence with direct data access and reduced annual platform costs by approximately **90%**.
- Cut the time to identify product issues and notify manufacturing from approximately **90 days to 3 days**, replacing manual review triggered by falling sales with **review-based alerts**.
- Prototyped and implemented **GPT-based classification** after a RoBERTa model reached 80% accuracy; achieved **95% sentiment accuracy** against human-labeled reviews, compared with a 60% vendor baseline.
- Connected Snowflake and Databricks processing through **Azure Data Factory** to daily-refresh Power BI reporting, with keyword flags and review prioritization for product-risk investigations.

Customer Churn & Purchase Propensity

- Engineered **20+ behavioral and lifecycle features** and trained LightGBM churn and purchase propensity models on Databricks, using Hyperopt tuning and MLflow tracking to produce customer-level CRM scores.
- Partnered with marketers on **A/B tests across approximately 14,000 users**; the best-performing targeted segment achieved **42% higher CTR** than randomly selected customers, with coupons offered to both groups.
- Automated monthly churn-risk and purchase-propensity reporting in Power BI, enabling marketing teams to identify high-risk segments and prioritize outreach without recurring analyst intervention.

RESEARCH EXPERIENCE

Carnegie Mellon University Pittsburgh, PA

Research Assistant, Human-AI Teaming Lab May 2026 - Present

- Developed an **LLM classifier for systematic literature screening** and benchmarked its classifications against human labels, reaching approximately **0.80 Cohen's kappa** agreement.
- Set confidence thresholds to route uncertain classifications to human reviewers, combining automated screening with human review of ambiguous cases.

EDUCATION

Carnegie Mellon University, Heinz College Expected December 2026

Master of Information Systems Management (Business Intelligence & Data Analytics)

Syracuse University

B.S. Information Management & Technology, Cum Laude

TECHNICAL SKILLS

Programming: Python (pandas, NumPy), SQL, PySpark
Modeling & Evaluation: scikit-learn, LightGBM, XGBoost, PyTorch, NLP, A/B Testing, Statistical Modeling
Data & Tools: Databricks, Snowflake, Azure Data Factory, MLflow, LLM APIs, Power BI, Git
